

element™

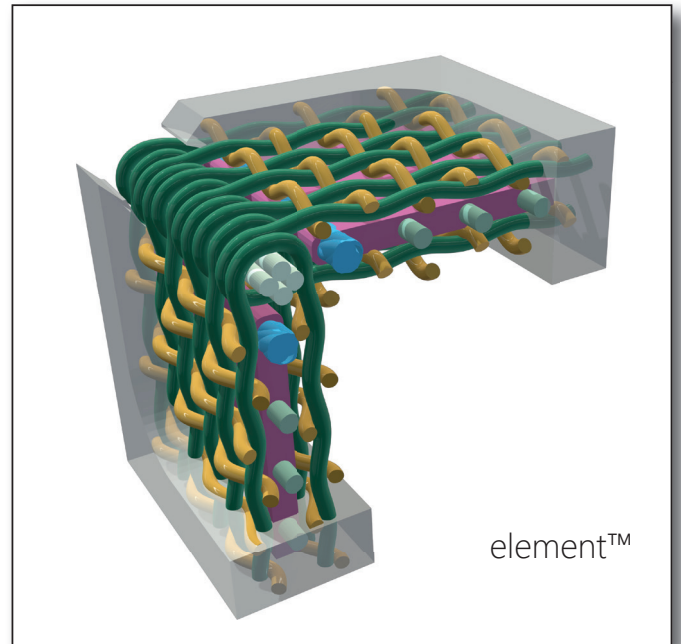

element™ is the first ever 3 layer seamed press fabric with the 3rd layer being intrinsic (inside the structure).

Conventional structures have a single-layer cloth over a woven double-layer structure.

element™ can provide the **highest water handling** of all 3 layer fabrics because unlike products with a 3rd layer on top, its intrinsic 3rd layer **keeps all 3 layers apart** to prevent fabric compaction...

Infinitely customizable properties: We can engineer the element internal layer compressible, open or vibration resistant... We can fine tune the void volume and compressibility to ANY machine requirements.
